01 Engine: MySQL InnoDB, character set utf8mb4. Created by backend/scripts/seed.py via SQLAlchemy.

02 Money is DECIMAL(10,2) in Philippine pesos. Promo discount is a percent on bouquet subtotal, not delivery.

03 Guest checkout stores guest_email on orders and leaves user_id NULL. Session carts use X-Session-Id.

04 On sign-in, a session cart merges into the user's cart (matching product_id + size_id quantities combine).

05 order_items freeze product_name, size_name, and unit_price so later catalog edits do not rewrite history.

06 Same-day rule is application logic (Asia/Manila, 15:00 cutoff), not a database constraint.

07 product_occasions is the associative table for the home/shop moment filters.

08 Favorites require a registered user. Reviews in the seed data belong to demo customers.

09 Demo promo: SARIWA10. Demo login: regina@example.com / sariwa123
